

Craft and Cake

Collection

The Old Courthouse Stowmarket 2016

Craft and Cake sessions are designed to introduce you to the wonders of laser cutting. Our products are designed to a high standard and are able to be constructed in the time given. However, they also provide opportunity for your creative intervention to customise and make original versions as gifts or home decoration.

Please note that they are craft products and not toys or commercial in nature. You will not find these on the high street. We hope that in every way you and your families will be blessed by your craft skills over the Christmas season as well as enjoying a cuppa and some freshly baked cake in this unique and historic building in Stowmarket

Santa Sweetie Sleigh

This project can be assembled and painted with little or no additional design work on your part. However, if you are feeling creative you can design the patterns on the side of the sleigh and paint the parts to suit your taste before fitting them together. This process means that your paintwork will look the business even if you struggle with fine motor control. Fill the sleigh with confectionary of your choice or perhaps pot-pourri instead.

Further sleigh kits can be purchased at cost price (plus p&p?) for you to give as a gift or to paint and assemble yourself.

Baubels

Made from a high quality printing card and acrylic or MDF frame these are an original design of a traditional product. Other materials can be used to achieve different effects.

Dangly Things

Dangly Things are laser cut from thin pine, MDF, plywood, and a range of other materials.

Come and explore ideas and see what you can do to make original 3D forms that catch the light and throw interesting shadows in the warmth of your room on a cold winter's night . . .

Slotty Trees

Slotty Trees is the perfect project to learn the process of making 3D objects from 2D shapes. A range of slotty products are shown here and they are all quickly made and assembled to provide that novelty aspect to your decoration.

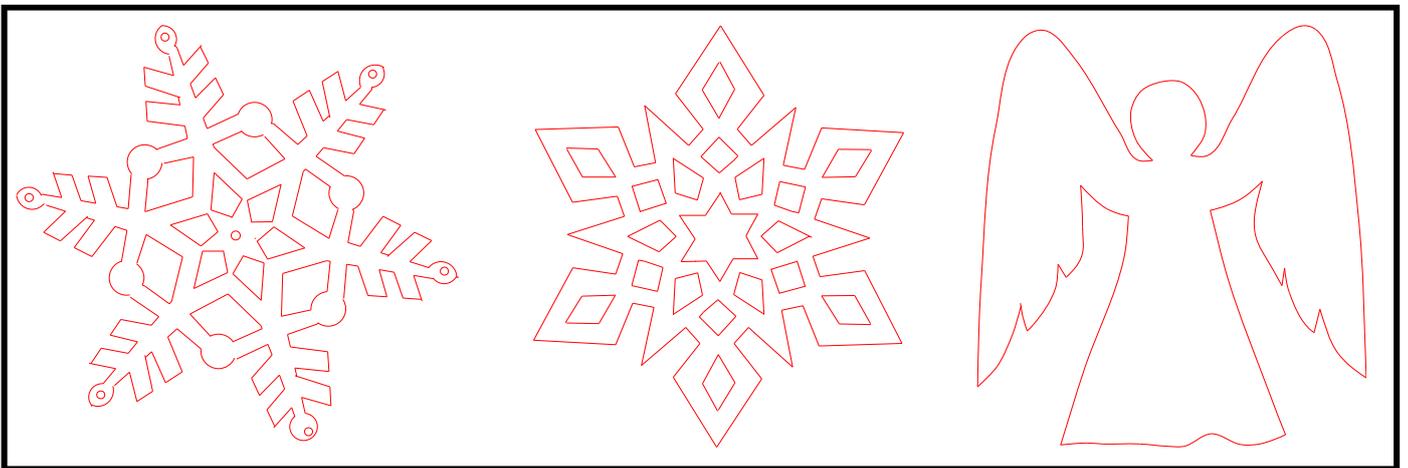

Acrylic Lamp

Utilising a widely available 5 LED lamp, this product comprises a frame and engraved transparent acrylic panel. Simple! You design the patterns and the laser cutter does all the work. It glows in the dark and you can easily change the acrylic panel for a different design. The amazing thing is that you can draw your designs onto paper and we can digitise these to produce a laser engraving. All you need to do is assemble the frame and draw the artwork with a biro.

Hanging Ornaments

One thing the laser cutter does well is to cut detailed shapes. We have a selection of card and board from which you can cut a small range of your products. You may adapt and combine existing patterns or generate your own ideas. Depending on complexity you should be able to make three or four designs based on a theme or a single more intricate design and multiples depending on material selected.

Tower Lamp

This project continues to evolve, depending on the materials we use. Based on a simple LED light widely available from hardware stores this lamp can be used as a comfort light or ornamentation. It can be made in MDF and painted or very quickly in translucent polystyrene sheet which gives a wonderful snow effect. You can make a small number of these which would post easily as a flat-pack novelty gift and even more appealing when made to an original design. Strictly NOT for use with a candle or incandescent light bulb.
